Summary

Dynamic Python Developer with a strong focus on integrating emerging cloud technologies to modernize and enhance legacy systems. Proven track record in advancing Python-based frameworks while leveraging complementary programming skills to drive innovation. Committed to continuous learning and professional growth in cloud solutions.

Education

PES Modern College of Engineering, Engineering in Information Technology July 2022 – July 2025

- CGPA : 8.2

Government Polytechnic Pune, Diploma in Information Technology July 2019 – July 2022

- Percentage : 90.8

Experience

Devops Trainee, PearlThoughts, Hyderabad June 2024 – July 2024

- Implemented automated deployment pipelines using CI/CD tools.
- Supported cloud infrastructure management through AWS services.
- Created CI and CD pipelines with Jenkins and Docker to automate the application build process.
- Configured, managed, and monitored cloud-based services such as AWS EC2, S3, EBS, ELB, RDS using Bash Scripting, Terraform and Ansible.

Projects

Containerization and deployment of an application using Docker - Built and containerized an application using Docker to ensure portability and consistent runtime environments across development, testing, and production. Worked with Dockerfiles, images, and containers to simplify deployment workflows.

Automated deployment of an application on EC2 using GitHub Actions - Designed and implemented CI/CD pipelines with GitHub Actions to automate application build, test, and deployment processes. Configured workflows to securely deploy applications on AWS EC2 instances, reducing manual effort and improving efficiency.

Shell script to list all resources running in AWS account - Developed a custom shell script to list and monitor all active AWS resources (EC2, S3, RDS, etc.), aiding in auditing, cost tracking, and resource management.

Shell script to maintain and automate backups - Wrote a shell script to automate periodic backups of important files, application data, and system logs. Implemented retention strategies to improve the reliability of backup processes.

Server configuration using Ansible - Created Ansible playbooks to automate server configuration. Successfully installed and configured Nginx Web Server using Ansible, reducing manual setup time and ensuring consistency across environments.

Certifications:

- IIT Bombay – **Implementation of Data Structures** (Nov 2021)
- AWS Training & Certification – **AWS Educate Getting Started with Databases** (Mar 2025)
- Amazon Web Services – **Certified Cloud Practitioner** (July 2025)
- AWS Training & Certification – **AWS Educate Introduction to Generative AI** (Mar 2025)
- **Technical Blogging** – Published technical blogs on Hashnode covering AWS services and Cloud Infrastructure.
